Re: Ex Parte Communication In the Matter of Review of the Commission's Rules and Policies Affecting the Conversion to Digital Television (MM Docket 00-39)

Dear Ms. Dortch:

On Wednesday, July 17, 2002, Lawrence R. Sidman and Sara W. Morris of Paul, Hastings, Janofsky & Walker, and David Arland of Thomson Multimedia ("Thomson"), met, in successive meetings, with Jane Mago, Michele Ellison, Louis Peraertz, and Joel Kaufman of the Office of General Counsel; Stacy Robinson, Legal Advisor to Commissioner Abernathy; and Catherine Bohigian, Legal Advisor to Commissioner Martin, to discuss issues in the above-referenced proceeding. The discussion focused specifically on proposals to require television manufacturers to integrate DTV reception capability in television receivers of certain screen sizes by a date certain.

Thomson reiterated its commitment to facilitating a speedy and successful transition to DTV and to being an industry leader in steadily increasing the availability of integrated over-the-air reception capability in its digital video products. To that end, Thomson provided an overview of its new line of DTV products, twenty-five percent of which include integrated over-the-air DTV reception capability. Thomson associated itself with the views expressed by Zenith in its July 12, 2002 letter to Chairman Powell concerning the feasibility of consumer electronics manufacturers phasing in over time ATSC reception capability, commencing with larger screen sizes. Thomson urged, however, that the most important factor to ensure consumers actually purchase integrated DTV receivers and, thus, that the 85 percent penetration level set forth in statute is met, is the integration of cable-ready functionality in all DTV receivers, an outcome that demands the implementation by cable MSOs of a single national standard. Thomson urged the Commission to take a holistic view in resolving outstanding obstacles to the transition, noting Congress's expressed intent to do so in legislation as early as this fall.

Ms. Marlene H. Dortch

Thomson noted that its new line of DTV products will include secure digital inputs, including DTVLink (1394) and DVI/HDMI.

Thomson reiterated its view, as discussed in its *Petition for Partial Reconsideration* filed in this proceeding (and distributed at the meeting), that the Commission lacks authority, including under the All Channel Receiver Act (“ACRA”), to adopt rules mandating DTV integration absent a specific act of Congress requiring such integration. Thomson noted, in particular, the vastly different circumstances and costs associated with the ACRA’s narrow goal of requiring televisions to receive UHF broadcasts (notably the simple and inexpensive “tweaking” of an existing tuning capability) versus those associated with DTV broadcasts (*i.e.*, the incorporation of an entirely new and complex *technology* at costs that would *double or triple* the cost to consumers of the most widely sold televisions). By contrast, Thomson noted that the Commission has broad authority to act regarding a national cable standard for DTV interoperability under Section 624A of the Communications Act – an action that, given that 70 percent of American households receive television via cable, would go vastly farther in driving DTV penetration than would the integration solely of over-the-air DTV reception capability.

In accordance with Section 1.1206 of the Commission’s Rules, 47 C.F.R. §1.1206, an original and one copy of this letter, including attachments, are being filed with your office.

Please direct any questions concerning this matter to the undersigned.

Respectfully submitted,

/s/

Lawrence R. Sidman
